

Omid Kianfar | Senior Front-End Developer

Email: omid.kianfar.dev@gmail.com | Phone / WhatsApp: +989356593765 | Location: Tehran, Iran

GitHub: github.com/omidKianfar | LinkedIn: linkedin.com/in/kianfar-omid1990 | Portfolio: omid-kianfar-portfolio.netlify.app

Summary

Senior Front-End Developer with **6 years of experience**, specializing in **Next.js** and **TypeScript**, with a strong focus on scalability and maintainability. **Includes 3.5 years remote with a U.S.-based company**, delivering complex, large-scale applications across markets in the U.S., Canada, and Europe — from owning flagship products end-to-end to solving critical integration, UI, and UX challenges across multiple concurrent projects.

Technical Skills

- **Core:** TypeScript | JavaScript (ES6+) | Next.js | React.js | Vue.js
- **Architecture & Patterns:** System Design | Atomic Design | Clean Code
- **State & Data Layer:** GraphQL | React Query | RESTful APIs | Redux Toolkit (RTK) | Valtio
- **UI/UX & Animation:** Tailwind CSS | MUI | Styled Components | Framer Motion | Lottie React
- **Multimedia & Rich Text:** Slate.js | FFmpeg | Wave Surfer
- **Backend, BaaS & Cloud:** Firebase (Firestore/Auth) | Supabase | Laravel | MySQL | AWS | Azure
- **Integrations & Forms:** Stripe | Socket.io | WebSocket | Google OAuth 2.0 | Twilio | React Hook Form | Yup
- **Quality, Tools & Methodologies:** Jest | React Testing Library | Git | Webpack | Jira | Agile/Scrum

Professional Experiences

Front-End Developer | Apsy Company | Remote (Los Angeles, CA) | Full-Time (3.5 Years)

- **Technical Maintenance & Troubleshooting:** Worked directly with backend engineers, designers, testers, and PMs on complex applications for U.S., Canadian, and European markets, flagging architecture issues and proposing front-end fixes.
- **Front-End Ownership:** Owned complete front-end architecture and delivery end-to-end for select flagship products, on top of an initial company boilerplate.
- **Ad-Hoc Problem Solving:** Brought into other projects on an as-needed basis to fix integration, UI, and UX issues — from isolated bugs to full feature rebuilds — without joining as a permanent team member.
- **Team Collaboration:** Worked alongside other front-end developers across 4 different internal teams, each with its own backend engineers, testers, and PMs — sometimes from project kickoff, each owning a distinct module, and sometimes joining an existing team to take on a project's full scope, a major module, or a specific feature.
- **Concurrent Project Delivery:** Worked across multiple concurrent projects at a time, taking on full ownership of one while contributing to others as a problem-solver on specific modules or features, depending on project needs.
- **Component Ecosystem & Scalability:** Built reusable component libraries (MUI, Styled Components) and improved performance.
- **Product-Minded Recommendations:** Across multiple projects, identified functional gaps beyond surface-level UI/UX feedback and proposed practical fixes with direct business value, typically resolved through focused syncs with management, designers, and backend engineers.
- **API & State Integration:** Delivered UI and integration work on core product screens (GraphQL, React Query).
- **Self-Directed Delivery:** Worked with minimal day-to-day direction — proactively surfaced blockers, requested syncs when needed, and followed established update/reporting practices to keep delivery on track.
- **Confidentiality Notice:** Due to strict NDA agreements, specific business logic and proprietary implementation details are intentionally omitted.

Front-End Developer | Ifuturesoftware Company | Remote (Dubai, UAE) | Part-Time (4 Months)

- **Platform expansion:** Extended a mobile-first, Instagram-style social app — built for a U.S.-based client and market — into a fully responsive desktop experience.
- **UI Ownership:** Built the marketing landing page from scratch (Next.js, Tailwind CSS, HeroUI).
- **API & State Integration:** Delivered UI and integration work on core product screens (GraphQL, React Query)
- **Quality & Stability:** Maintained code quality and resolved production bugs within Jira-managed sprints.
- **Confidentiality Notice:** Due to strict NDA agreements, specific business logic and proprietary implementation details are intentionally omitted.

Full-Stack Web Developer | Freelance | Remote (Tehran, Iran) | 1.5 Years

- **End-To-End Delivery:** Managed the complete lifecycle of web applications, translating business requirements into scalable solutions using Laravel, Vue.js and React.js
- **Architecture & Logic:** Architected robust database schemas using MySQL and implemented complex back-end logic, ensuring data integrity and application efficiency.
- **Code Quality:** Applied Clean Code principles and TypeScript to ensure long-term maintainability and performance of the codebase.
- **Client collaboration:** Successfully delivered custom-built solutions for various clients, ensuring high responsiveness and a user-centric design approach.

Personal Projects (Technical Showcases)

Mini-Jira | Enterprise Project Management SaaS

Live-Demo-Link: next-mini-jira.netlify.app | **Github-Link:** github.com/omidKianfar/next-mini-jira

- **Architecture:** Engineered a scalable SaaS using Next.js 16 (App Router) and Atomic Design for modular, maintainable code.
- **State Management:** Managed complex global state (tasks, chats, users, filters) with Redux Toolkit, synced in real-time with Firebase Firestore listeners.
- **Media Pipeline:** Built a custom in-browser video compression (FFmpeg WASM) and image cropping/optimization pipeline (react-easy-crop), offloading heavy processing from the backend.
- **Support & Communication Hub:** Built a real-time support chat (Firestore) with a custom Slate.js editor, voice recording (RecordRTC), and audio waveform visualization (wavesurfer.js).
- **SaaS Billing:** Implemented end-to-end Stripe subscription logic (monthly/yearly plans, trial mode) with API-driven success/failure flows.
- **Access Control & Quality:** Built Role-Based Access Control via custom Auth/Role guards, and covered core components (forms, modals) with Jest and React Testing Library.

Google Calendar Task Manager | SaaS

Github-Link: github.com/omidKianfar/next-google-calendar-app

- **Authentication:** Engineered a secure Google OAuth 2.0 (Implicit Flow) integration with in-memory token storage to avoid cross-tab sync issues and client-side storage risks.
- **Business Logic:** Centralized all calendar CRUD operations and state (loading/error) into a single custom hook (useGoogleCalendar), isolating logic from the UI.
- **Scheduling Engine:** Built a FullCalendar-based interface for viewing, creating, editing, and deleting events, with modal-driven confirmation flows.

- **Forms & Validation:** Implemented React Hook Form with Yup, including cross-field validation (end time must follow start time).
- **Quality Assurance:** Covered core logic and components (schema, modals, inputs) with Jest and React Testing Library unit tests.
- **Performance:** Optimized load times via React Suspense and lazy-loading for modals and heavy components.

Select Companies Projects

Infuuse | B2B Business Automation SaaS (Enterprise Business Platform)

- **Scalability:** Sole front-end developer for a multi-tenant B2B platform (Next.js, GraphQL), working alongside a backend team of 4 engineers, 3 QA testers and other teamats; owned all front-end architecture and technical decisions end-to-end beyond the initial boilerplate. Built a modular UI system (Atomic Design).
- **Unified Inbox:** Built a real-time unified inbox (WebSocket) merging live chat, Twilio SMS/calls/video, and Gmail messages into a single conversation view.
- **Security & Integration:** Built hierarchical route protection and real-time communication modules (Twilio, Google OAuth).
- **Billing & Reporting:** Implemented Stripe subscription billing (monthly/yearly/custom, with discount logic) and analytics dashboards (Chart.js) for tickets and calls across custom time ranges.
- **Data Handling:** Managed high-frequency data updates (React Query, Valtio), drag-and-drop ticket management (react-beautiful-dnd), and complex form validation (RHF, Yup).
- **Productivity:** Integrated a custom Slate.js editor and media pipelines to streamline user workflows.
- **Confidentiality Notice:** Due to strict NDA agreements, specific business logic and proprietary architectural details are intentionally omitted.

Octobit | Enterprise EdTech Scenario & Assessment SaaS

- **Dynamic Engine:** Owned front-end architecture for a rule-based branching engine, working alongside 2 QA testers and other teamats, enabling unlimited user paths based on dynamic assessment metrics.
- **Visual Editor:** Built an interactive Node-Graph Editor (React Flow) for visual scenario configuration with automated integrity checks.
- **Admin & Access Control:** Built an admin panel for scenario/category creation with pre-publish validation and safe publish/unpublish handling, plus team management (member invites via email, role assignment, admin activation).
- **Progress Visualization:** Engineered SVG-based, color-coded progress indicators tied to dynamic scoring, alongside Recharts dashboards for usage and payment tracking.
- **Biometric & State:** Integrated AWS Amplify for real-time audio stress analysis; managed complex state across multi-role dashboards (Valtio, Redux Toolkit).
- **Enterprise Features:** Built a multi-tenant billing system (Stripe), real-time notifications (WebSockets), and automated certificate generation on scenario completion.
- **Technical Compliance:** Specific project architecture, proprietary conversational logic, and client-side implementation details are protected under NDA.
